Welded and Seamless Wrought Steel Pipe

A Standard for Engineers Worldwide

ASME B36.10M – 2018

This standard covers the standardization of dimensions of welded and seamless wrought steel pipe for high or low temperatures and pressures. The word pipe is used as distinguished from tube to apply to tubular products of dimensions commonly used for pipeline and piping systems. Pipe NPS 12 (DN 300) and smaller have outside diameters numerically larger than corresponding sizes. In contrast, the outside diameters of tubes are numerically identical to the size number for all sizes NPS 14 (DN 350) and above. This new edition expands Table 2-1 (formerly Table 1) to include new data for small nominal pipe sizes.

Description
Title: ASME B36.10M – 2018, Welded and Seamless Wrought Steel Pipe
ISBN: 9780791872161
No. Pages: 32
Publish Date: 2018
Print Book / Order No.: M03118
Digital Book (PDF) / Order No.: M0311T

ASME Codes and Standards

ASME is the leading international developer of codes and standards associated with the art, science, and practice of mechanical engineering. Starting with the first issuance of its legendary Boiler & Pressure Vessel Code in 1911, ASME’s codes and standards have grown to nearly 600 offerings currently in print.

Stainless Steel Pipe

A Standard for Engineers Worldwide

ASME B36.19M – 2018

This Standard covers the standardization of dimensions of welded and seamless wrought stainless steel pipe for high or low temperatures and pressures. The word pipe is used, as distinguished from tube, to apply to tubular products of dimensions commonly used for pipeline and piping systems. Pipes NPS 12 (DN 300) and smaller have outside diameters numerically larger than their corresponding sizes. In contrast, the outside diameters of tubes are numerically identical to the size number for all sizes NPS 14 (DN 350) and above. The wall thicknesses for NPS 14 through 22, inclusive (DN 350–550, inclusive), of Schedule 10S; NPS 12 (DN 300) of Schedule 40S; and NPS 10 and 12 (DN 250 and 300) of Schedule 80S are not the same as those of ASME B36.10M. The suffix “S” in the schedule number is used to differentiate B36.19M pipe from B36.10M pipe. ASME B36.10M includes other pipe thicknesses that are also commercially available with stainless steel material. This new edition contains changes to Table 2-1 (formerly Table 1) for various outside diameters and plain end masses.
