

## **B94 Committee on Cutting Tools, Holders, Drivers and Bushings**

The B94 Committee on Cutting Tools, Holders, Drivers and Bushings was **disbanded** on June 8, 2004 because of lack of interest from the industry. The remaining members and B94 Standards have been incorporated into the B5 Committee on Machine Tools structure. The B94 Subcommittee on Taps has been incorporated into the B1 Committee on Screw Threads. See those Committee Web pages for action on the remaining B94 standards.

---

**In 2010**, the B5 Technical Committee 94 on Cutting Tools is looking for engineers/technicians who are knowledgeable on metalworking cutting tools and their accessories. This committee is in the need of serious professionals, willing to invest their time and expertise by volunteering to participate in the standardization of Milling, drilling and boring tools, Reamers, Saws and machine knives, Tool holders, adaptors and drivers, Tool guide bushings, Tool set-up gages, and Tool testing procedures.

This committee and its technical working groups generally meet one to two times a year at mutually agreed venues. As member of the committee you will be submitting, drafting and reviewing standards proposals and drafts and making comments and counterproposals on our national standards.

If you are interested in becoming a participant please contact:
