CSD Case 4
CF-310 Primary Safety Control – CSD-1

Inquiry: Under what conditions is the use of a primary safety control that can be electronically reset without local manual intervention permitted?

Reply: It is the opinion of the committee that a primary safety control that can be electronically reset without local manual intervention is permitted providing the following requirements are met:

a) The boiler has an input of 400,000 Btu/hr (117 kW) or less.
b) The boiler complies with Part CW, CE-110(a), CE-110(b), and CE-110(j).
c) The boiler is labeled and listed by a nationally recognized testing agency or other organization that is acceptable to the authority having jurisdiction as complying with ANSI Z21.13/CSA 4.9.
d) All other requirements of CSD-1 shall be met.
