Errata to ASME B30.6 – 2020
B30.6 Derricks

The errata correction listed below applies to ASME B30.6 – 2020

6-3 Operation
6-3.5 MISCELLANEOUS
6-3.5.3 Derrick Operation in the Vicinity of Electric Power Lines
6-3.5.3.1 General.

(h) Before beginning operations, the Site Supervisor shall ensure that:

(1) The derrick has been configured and located as planned and verified to be correct.

(2) The area around the derrick through the full range of rotation has been defined up to the maximum reach.

(3) The dimensions of the load(s) and rigging that will be used have been identified.

(4) A preliminary determination is made if any part of the derrick, load line, rigging, or load, if operated at the derrick’s maximum reach has the capability to get closer than the specified clearance.

(5) The evaluation of the maximum reach relative to the power line minimum clearance distance shall include consideration of sag, wind and other changing conditions.

(6) The Lift Director has the information contained in 6-3.5.3.1 (h)(1) through (h)(4)
