Errata to ASME B30.9 Slings

The errata correction listed below applies to ASME B30.9 – 2021

9-7.10.4 Rigging Practices

(d) Slings in contact with edges, corners, protrusions, abrasive surfaces, or connecting hardware shall be protected with a material of sufficient strength, thickness, and construction to prevent damage to the sling, unless the edges are rounded to a radius as recommended by the sling manufacturer, a qualified person, or in compliance with WSTDA-RS-1HP, Section 4.6.2 (see Nonmandatory Appendix A).
